

Cultivate Learning App: By Tutor Nation

CS 495: August Connors, Casey Derringer, Mark Kim,
Ryan McCulley

Motivation

- Personalized tutoring services for K-12 students
- Students can't always meet
- Practice time is still necessary, tutors are not
- Students can practice lessons on their own time
- App provides personalized, more engaging content, and can improve learning

Users

- Four Primary Categories of User
 - Students
 - Engage with learning content
 - Parents
 - Monitor student's progress
 - Tutors
 - Monitor student's progress and tweak content
 - Admins

Features

- The app should be able to:
 - Allow students to create their own profile
 - Provide a survey to gain insights on student
 - What they would like to learn, their age, and their interests
 - Deliver lessons based on student's profile.
 - Track student's progress
- Curriculum Alignment

5 STAR STUDENTS

Interests Survey

Tell us about your interests!

1. Select your interests (check all that apply)

- ☐ Astronomy
- ☐ Band
- ☐ Baseball
- ☐ Basketball
- ☐ BMX
- ☐ Bowling
- ☐ Boxing
- ☐ Cars
- ☐ Cheerleading
- ☐ Chess
- ☐ Color Guard
- ☐ Computer Programming
- ☐ Cooking

Technical Specifications

- Platform accessibility
 - Primary focus: IOS application
 - Chromebook-compatible and Android applications
- AI integration
 - Personalized learning recommendations
 - Adaptive game content based on student performance/interests
- Data Management
 - Secure user authentication and role-based access control
 - OAuth
 - Cloud database for user profiles, progress data, and analytics
- Security and Privacy
 - Compliance considerations for student data privacy (FERPA)

Potential Development Environment

- Primary platform: iOS
 - Future Goals: Chromebook-compatible and Android applications
- Initial Launch
 - Private iOS release for testing/feedback
- Development Tools
 - XCode
 - Swift/SwiftUI for frontend
 - ExpressJS or Spring Boot for backend
- Architecture
 - Client-server model
 - Cloud-based backend

Related Work

- Smart Tutor Matching - Search, filters, personalized recommendations
- Instant Booking - real-time availability, easy reschedule/cancel
- Live Tutoring – video, screen share, whiteboard, file sharing
- Learning Progress – session history, goals, progress tracking

- AI Problem Solver – instant step-by-step solution
- Photo Input – scan homework questions
- Multi-Subject Support – math, physics, chemistry, word problems
- 24/7 Availability – no scheduling or waiting
- Instant AI help, not live tutoring sessions

Challenges/Obstacles

- Development Environment Set up – Current team has Window system, need to figure out how to develop for iOS using virtual computer
- Implementation using AI – sponsor wants to add feature where practice problems for the lesson are generated using AI, need to figure out which model/API to use
- Feature Separation – Sponsor wants to have different user roles such as parents, students, tutors. Need to figure out how to separate features using minimal approach
- Screen Sharing – Tutor Nation expects live online tutoring; a live screen and file sharing feature is needed.
